PROJECTS

Online Voting Portal

This Online Voting Portal allows users to either register as a **voter** or a **candidate** to participate in an election process. The portal is built with **PHP** for the Backend and **Bootstrap** for a responsive and user-friendly Frontend design.

- Voter Registration: Users can sign up and register as voters, providing necessary personal details for authentication and participation in elections.
- Real-Time Results: The portal provides real-time vote count updates, ensuring voters can track the election progress.
- Responsive Design: The portal uses Bootstrap to ensure it's mobile-friendly and accessible across all devices.

E-Learning Platform

- 1.) This E-learning platform is a web application built using Laravel for the Backend, designed to provide a flexible and user-friendly online education experience. It enables students to learn at their own pace and also allows passionate educators to become instructors and share their knowledge.
- 2.) Course Catalog: Features a wide variety of courses across multiple subjects, with detailed course pages including descriptions, video previews, curriculum outlines, pricing, and instructor profiles.
- 3.) User Authentication: Students and instructors can register and log in to access personalized dashboards. Students can track enrolled courses and progress, while instructors can manage the courses they teach.
- 4.) Enrolment & Learning: Students can browse and enrol in courses, access video lectures, notes, and quizzes. They can also receive completion certificates upon finishing a course.
- 5.) Instructor Panel: Registered users can apply to become instructors, create and manage their own courses, upload video content, monitor student engagement, and earn from course sales.
